

Jade has attained AS9100 and ISO 13485 Certification

PHILADELPHIA (August 18, 2009)—Jade Equipment Corporation announces today that, as of July 2009, the company has officially passed all requirements and is now fully registered for both the AS9100 Aerospace Standard (Quality Management Systems – Aerospace – Requirements) and the ISO 13485 Medical Standard (Medical Devices – Quality Management Systems – Requirements for Regulatory Purposes). Jade is one of the first companies in the world to achieve registration to both of these challenging standards at the same time.

Jade sought registration to both standards to better serve the aerospace and medical device manufacturing industries.

“Receiving these two important quality certifications is key for Jade’s continued success”, said John Delp, Jade’s President. “By obtaining these goals, it will enable us to further penetrate the aerospace and medical device markets”. “It’s very exciting to realize a new level in Jade’s role as a world leader in ultra high precision machining and contract manufacturer of complex devices. This most recent accomplishment will create new and exciting opportunities for us in these demanding markets”.

Jade Equipment Corporation is recognized as an industry leading precision parts machining and manufacturing company for highly specialized, engineered machine parts, specialty tooling, and mechanical production and assembly machines fabricated from virtually any material. A rich technical history combined with a strong dedication to constant research in precision technology through high quality processes and production allows Jade to meet advanced design challenges with the same expert craftsmanship that has supported the company’s growth over the many years since its inception in 1947. Reaching certification in these two major industry specific standards is the latest milestone along this path.
